

Project Induss, Antwerp:

Special application: demineralised process water

Project data

Project description :	New installation of a transport pipeline for highly corrosive deionized water through an industrial area with many years of chemical and refining operations
Challenges:	Contamination of the process water by the industrial use of the site in the past as well as the risk of leaching the pipe material into the medium
Solution:	egeplast SLA® PP-R
Installation:	Horizontal directional drilling
Pipe material used:	egeplast SLA® Barrier Pipe, OD 560 mm SDR 11 straight length 13,4 m
Parties involved in the project:	Induss
